Annexure-I

Technical Specification for Supply & Installation of DC-DC converter (Buck and Boost) with variable load.

Parameter	Specification
Input voltage	Single phase 230V, 50Hz
Semiconductor device to be used	MOSFET discreet modules with rating 200V, 5A or more.
Output	Step down supply voltage should be 24V or more and output voltage should be controllable by changing duty ratio.
	Operating maximum switching frequency should be 25 kHz or more
	Variable load resistance should be included with the setup.
	Verifiable gate pulse waveform, output waveforms with R load and provision for observing inductor voltage and current waveforms.
	Provision for studying Continuous Conduction Mode (CCM) and Discontinuous Conduction Mode (DCM) of operation should be present. Required inductances should be provided
Important features	Isolation between control and power circuit should be provided.
	Tests points should be provided for measurement and observation of important voltages and Gate pulses using multi-meter and oscilloscope.
	Clear circuit diagram should be provided on the front panel of the kit with test points.
	Power ON/OFF switch along with suitable protection for the setup (Fuse, Snubber etc.)
	The circuits inside the box should be either visible from outside or should have clear access through removable/hinged cover.
Accessories	Suitable connectors like patch cord and banana connectors should be provided
	Spare semiconductor modules of equal numbers as used in the power section of actual setup are to be provided
	Laboratory manual with details of circuit diagram should be provided
