It should provide variable injection modes (full loop, partial loop, capillary etc.) and capable of simultaneous injection. The auto sampler should have the facility for fraction collection, auto-dilution, concentration/ matrix elimination etc. and should be able to perform multi-point calibration using single standard. The autosampler should support variable sample vial capacity from 1-10 ml with minimum 30 positions for samples. The entire sample path should be metal free and is suitable for trace analysis
2	Pump	<ul style="list-style-type: none"> A high pressure pump of serial dual piston must be available in isocratic and gradient configurations. It should be metal free, chemically inert and compatible with aqueous eluents from pH 0-14 and reverse-phase solvents. Pump should automatically stop the flow in case of leaks, flow restrictions, or depleted eluent reservoir. Pressure range: 0-5000 psi (0-35 MPa), flow rate adjustable from 0.001 ml/min to up to 5 ml/min with accuracy $\pm 0.1\%$, precision $\pm 0.1\%$; pressure ripple $< 1\%$ at 1.0 mL/min. Pump should be provided with power failure protection.
3	Detectors	<p>Conductivity detector</p> <ul style="list-style-type: none"> Microprocessor based thermostat controlled digital signal processing with an accuracy of $\pm 0.001^\circ\text{C}$. Temperature of the conductivity block should be adjustable between 20°C-50°C. Conductivity measurement range 0-15000 $\mu\text{S}/\text{cm}$ or more. Cell volume: $\sim 1.0 \mu\text{L}$ with maximum pressure 10 MPa (1500 psi). <p>Electrochemical detector</p> <ul style="list-style-type: none"> Microprocessor controlled digital signal processing with

		<p>appropriately low noise levels.</p> <ul style="list-style-type: none"> Cell and detector electronics are integrated to minimize noise, maximize electrical isolation and shielding, and maximize thermal stability. Electrodes: gold, glassy carbon, platinum, and silver. Reference electrodes: either pH-Ag/AgCl, Ag/AgCl in combination or PdH. Autoranging digital amperometry signal with compatible software.
4	Columns	<ul style="list-style-type: none"> Preferably micro bore columns for analyses of anions, cations, transition metals, lanthanides etc. should be individually quoted with respective guard columns and the associated ferrules and end fittings. All columns must be solvent compatible and non-corrodible components working at pH 0-14. The system should be able identify the columns to configure the maximum flow rate and pressure for the column. System should be capable to treat the turbid samples having high matrix to allow clean samples to IC system, which protects column. The entire setup should be controlled by software and should be automatic.
5	Suppressor	<ul style="list-style-type: none"> System should have the facility to enhance the analyte conductivity and suppress background conductivity with at least 5 years warranty.
6	Injector	<ul style="list-style-type: none"> Dual six port injector valve with fast response time. Sample loops should be in the range of minimum 5µL to up to 200µL or more, which can be operated through software.

IC system module should be provided precise and reliable automatic elution where the eluent is generated directly from the cartridge and the deionized water consistently and conveniently. Eluent cartridges should be provided and quoted separately.
9	Accessories & Essential consumables	<ul style="list-style-type: none"> All important accessories like polypropylene bottles tubing, fittings, spares and eluent cartridges etc., required for smooth and complete operation of the system for at least 2 years/3000 samples (whichever is higher) should be supplied. Provide the list of necessary consumables for smooth running of machine for a period of minimum three years along with the cost. All accessories required for installation like Mobile

		phases and solvent filtration system should be provided along with the system.
10	Necessary standard and chemicals	<ul style="list-style-type: none"> All the necessary chemicals (eluent), eluent cartridges etc. and NIST certified standards of ion chromatography grade should be provided for 3 years/5000 sample and should be quoted in clear terms. Towards this, a list of all the items should be provided separately.
11	Installation & Testing	<ul style="list-style-type: none"> Installation & testing of the equipment at site for acceptance. At least 5 day training/demonstration to be provided for the instrument at IIT (ISM) free of cost.
12	Warranty charges	<ul style="list-style-type: none"> Total cost of supply must include 3 (three) year onsite warranty including technical support (service, support and maintenance) for all equipment and accessories (within 5 business day support). The cost of repair/replacement/shipping, if any, should be borne by the supplier during the warranty period. A three year warranty certificate including technical support is required from the original equipment manufacturer (OEM). In case the local representative of the OEM/Principle Company is replaced, a letter of commitment by the OEM/Principle Company is required stating that they or their new representative will directly cover the warranty and service the equipment as and when required as per the terms and conditions mentioned in this document.
